

A

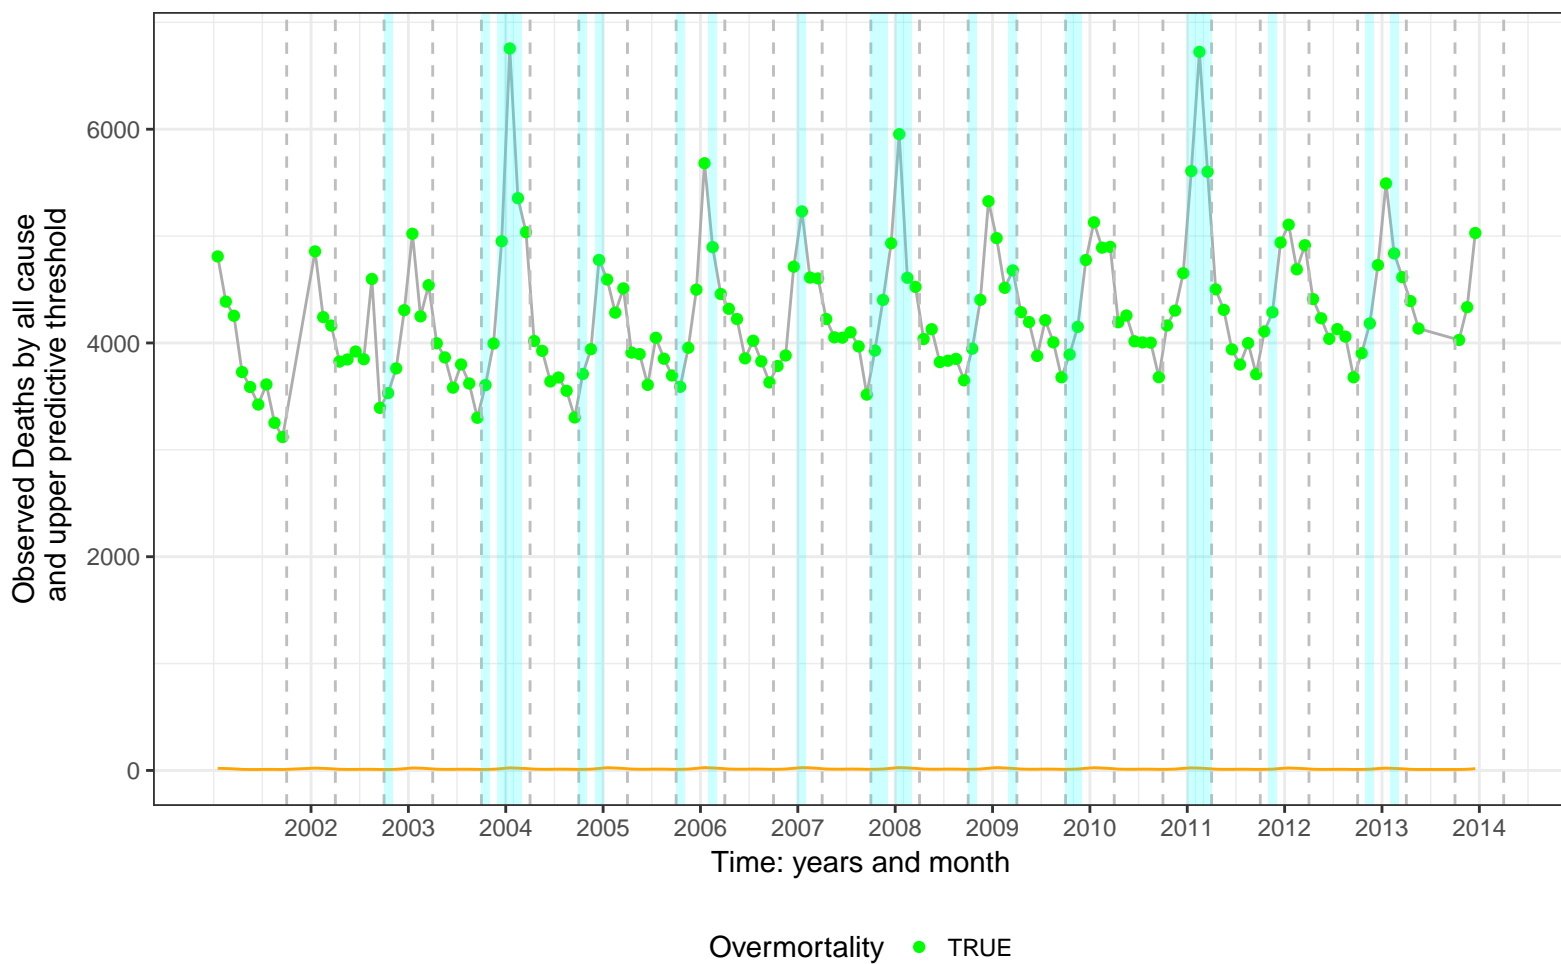

Epidemic threshold: Death for Influenza

Epidemic threshold estimated by poisson regression (UP.IC 95%):
monthly deaths predicted by age group, educational level and exposed population

**B**

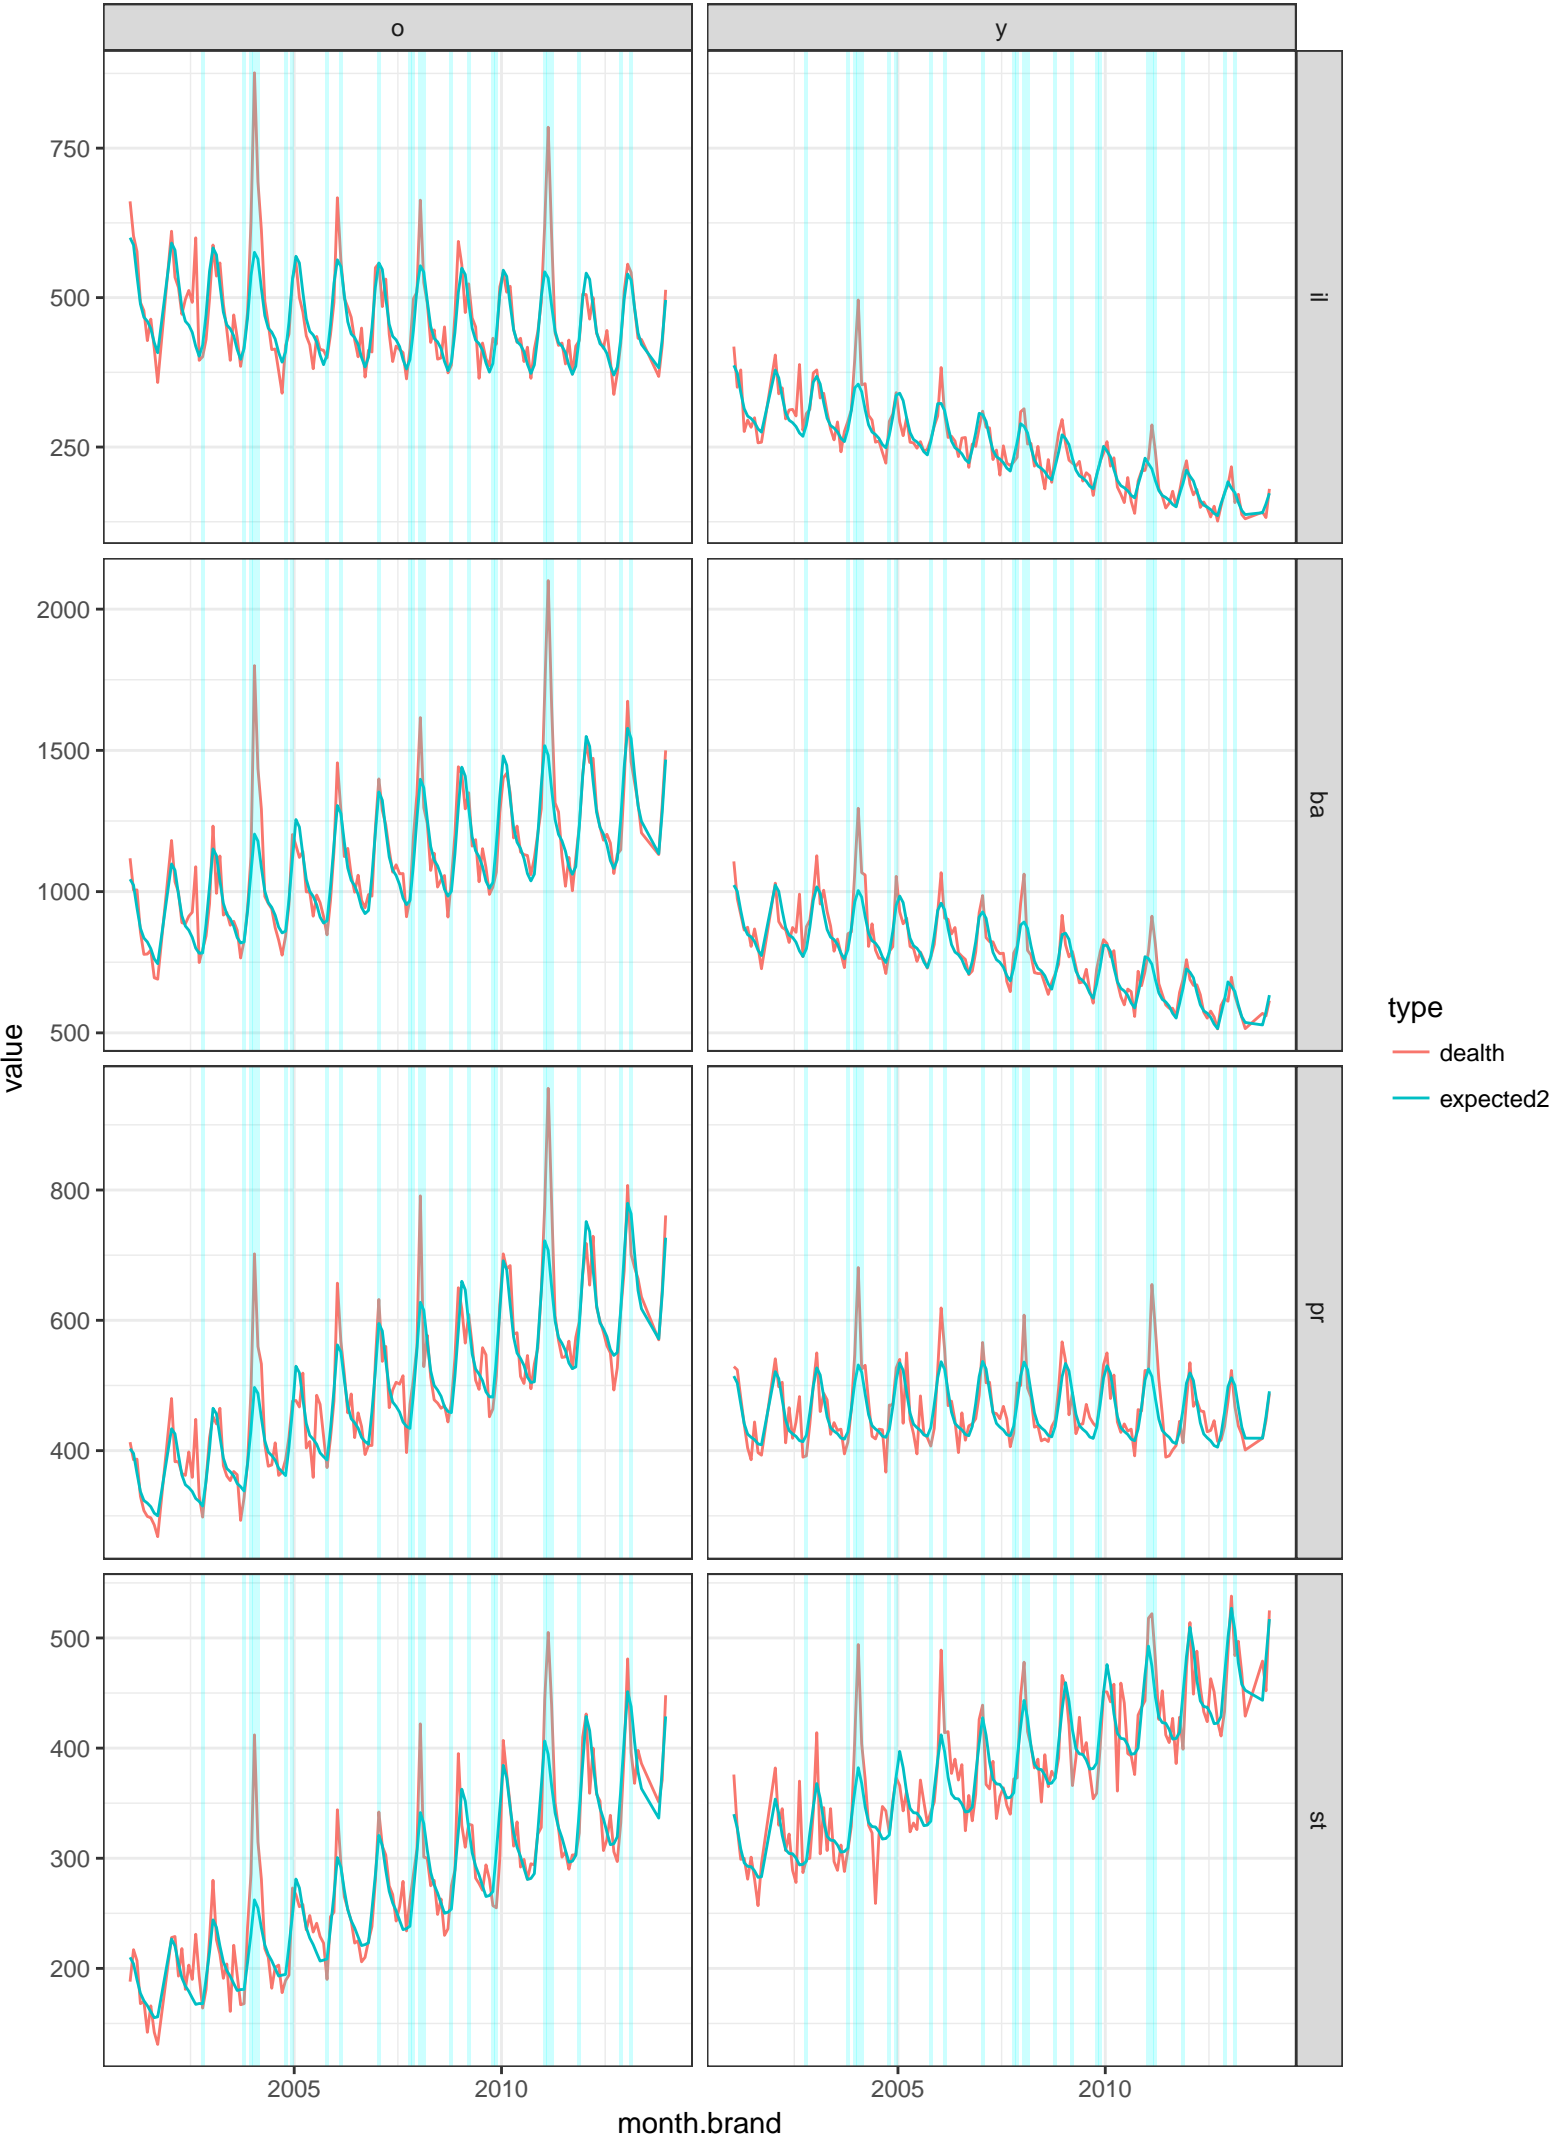

Epidemic threshold: all Death

Over-mortality threshold estimated by poisson regression (UP.IC 95%):
monthly deaths predicted by age group, educational level and exposed population

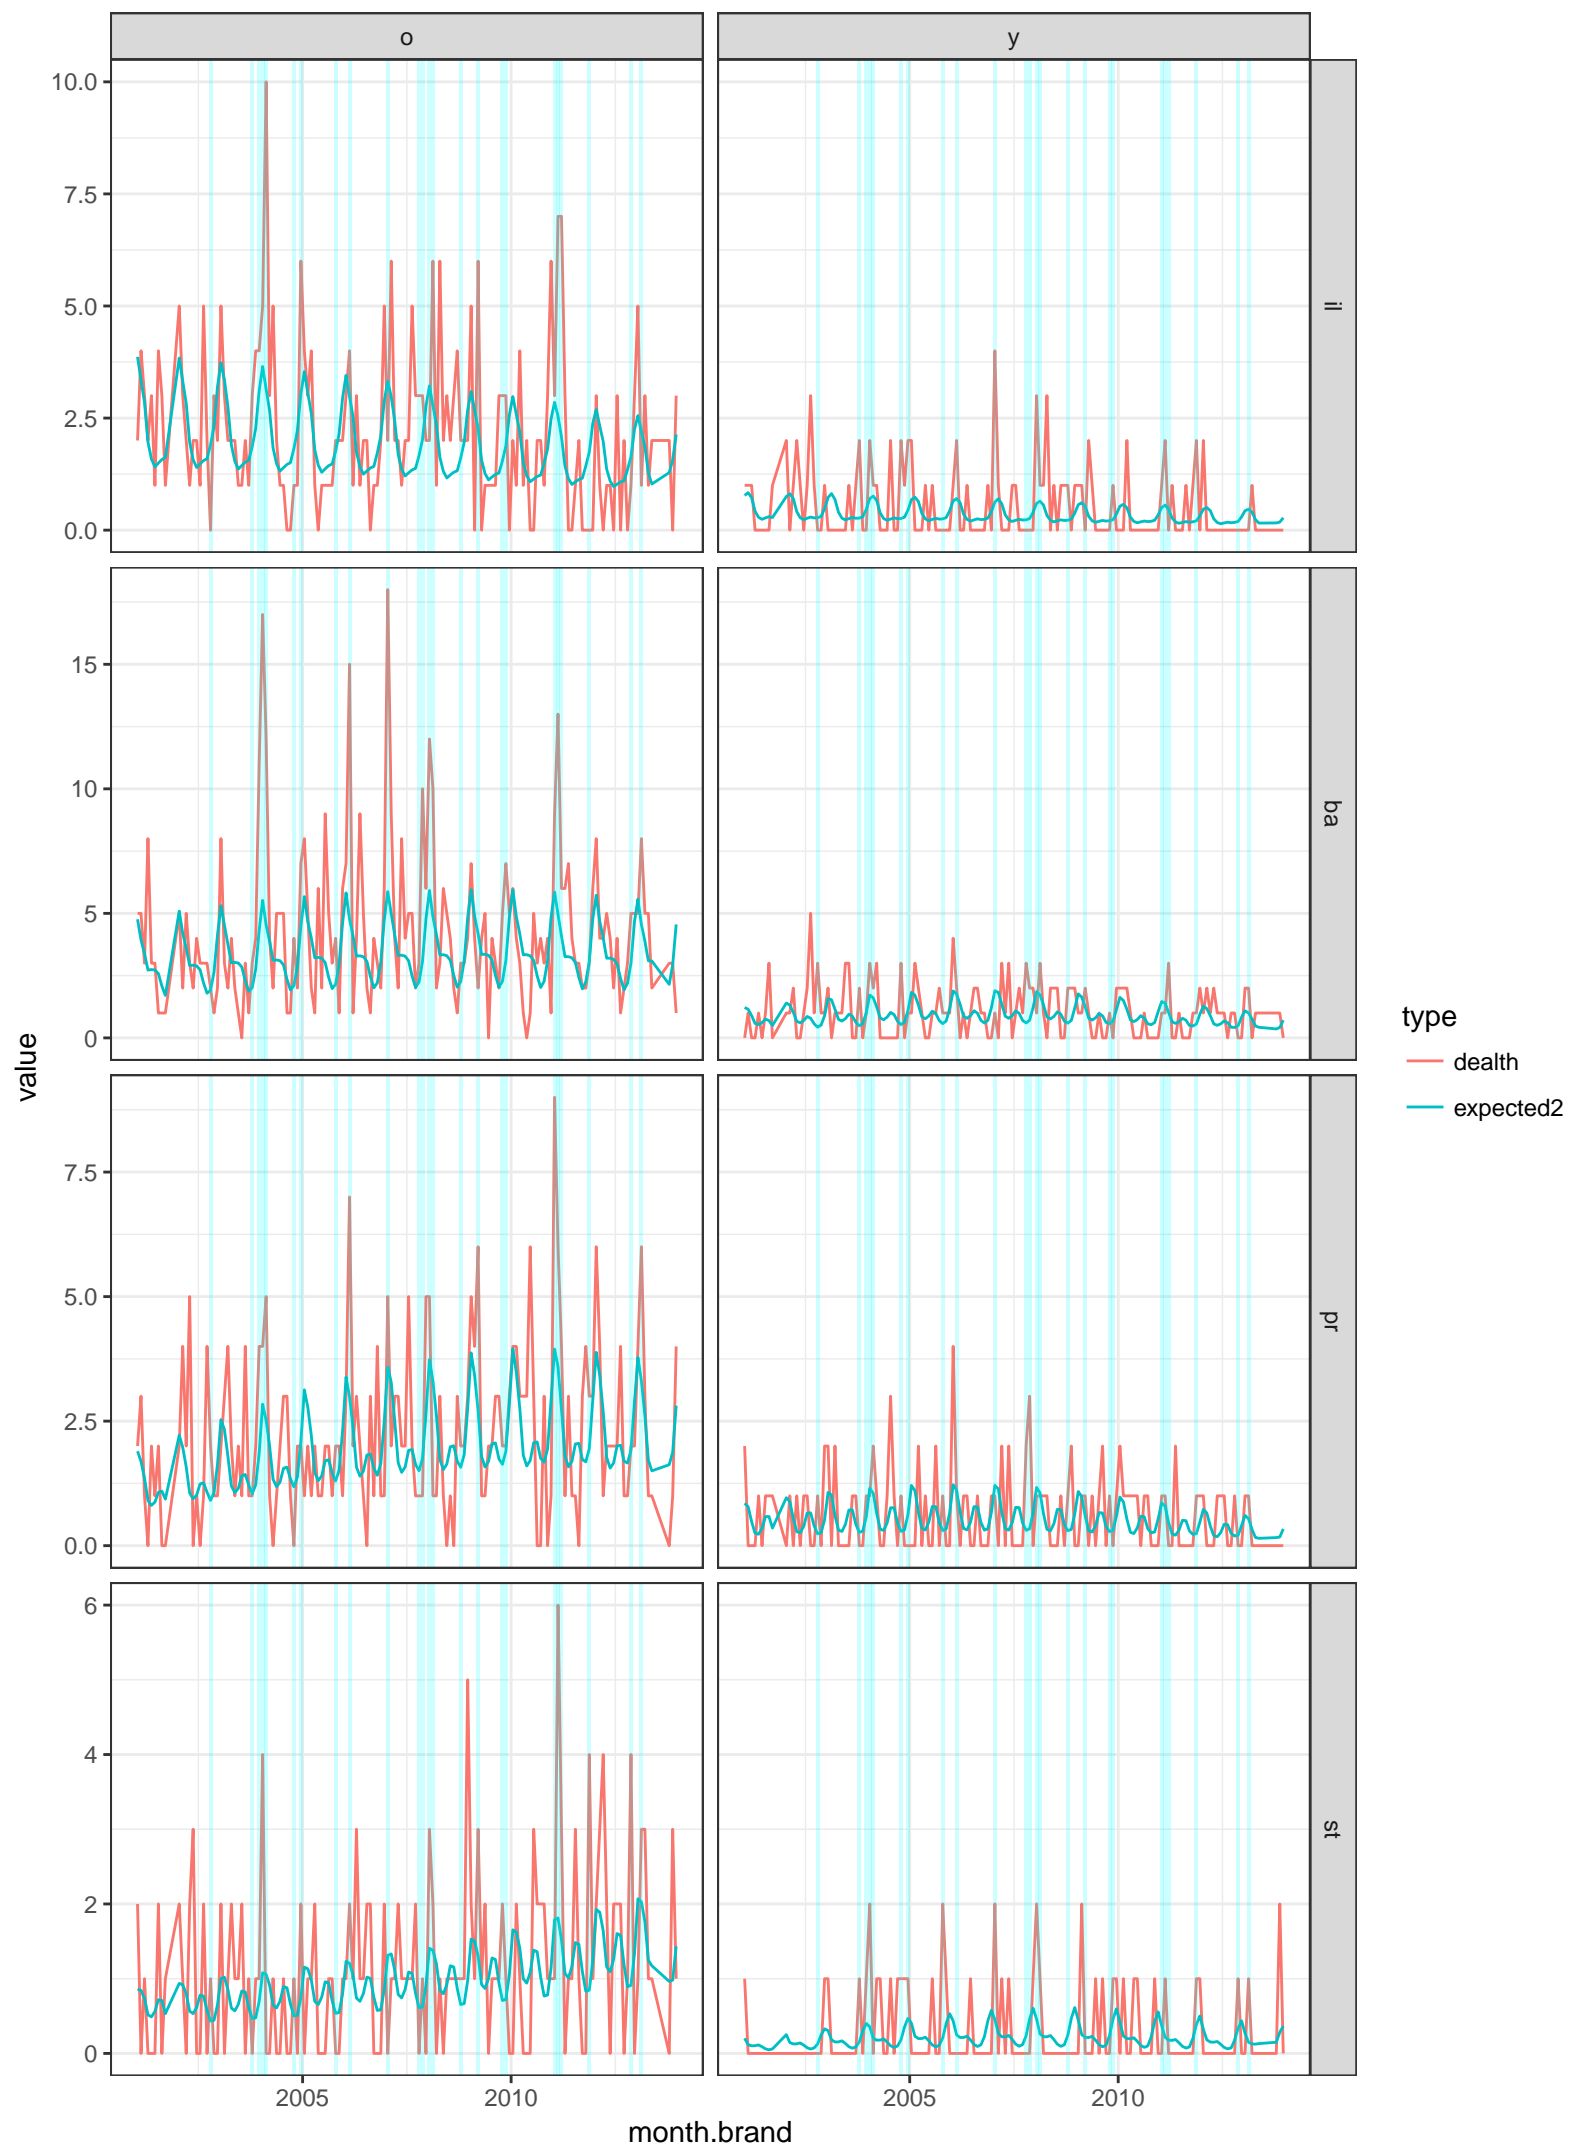

All death: Observed and predicted deaths

Predicted deaths by lineal regression model for each age and educational level

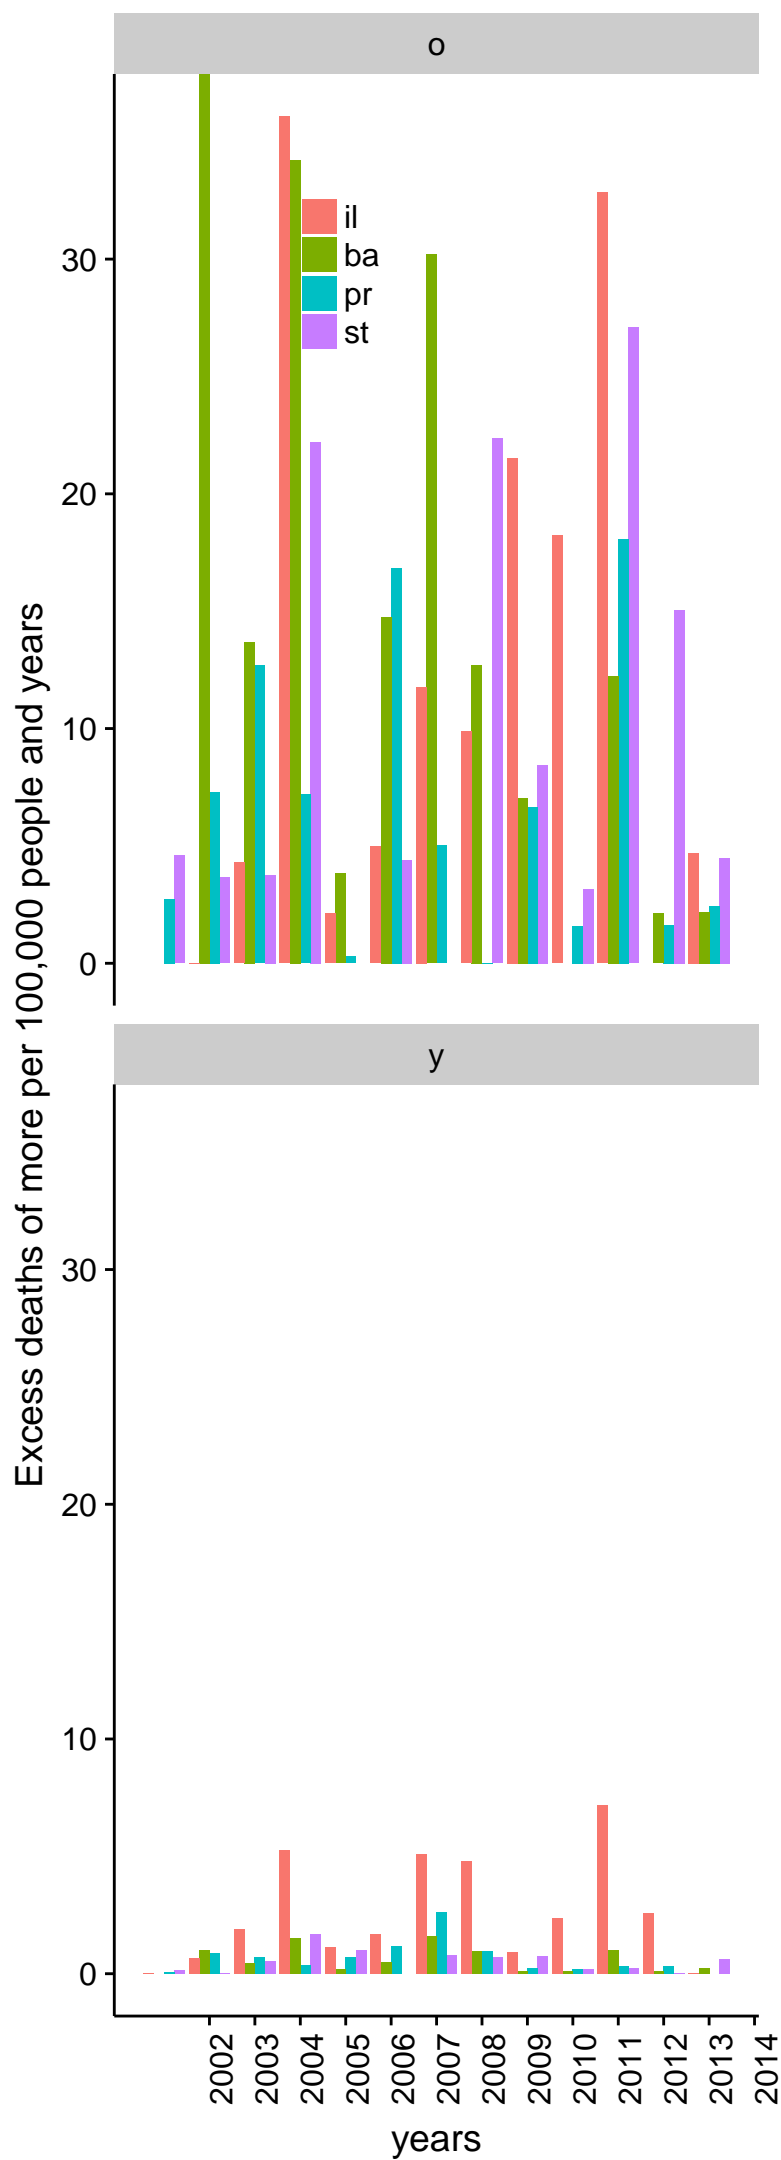

Influenza: Observed and predicted deaths

Predicted deaths by lineal regression model for each age and educational level

A

Influenza: epidemic overmortality

B

All death: epidemic overmortality
